

SYSTEM TO ACQUIRE LOCATION INFORMATION

ABSTRACT

A system to acquire information associated with a location includes search
5 of a network for sensor measurements associated with a location, and acquisition
from the network of a plurality of sensor measurements associated with the
location. According to the invention, the acquired plurality of sensor
measurements includes measurements obtained by a plurality of entities. By
virtue of this arrangement, a user is able to efficiently receive a representation of
10 the location based on available sensor measurements.
